HOSPITAL HUB[™]

Connect EMS and the ED

Improve facility preparedness and overall patient care with heightened hospital awareness. ImageTrend Hospital Hub[™] allows EMS to visually and audibly alert receiving facilities when enroute with a patient and enables the streamlined communication between medical professionals working in ambulances and in emergency departments (ED).

Increase Hospital Readiness

When paired with the Alert function in ImageTrend Elite[™], Hospital Hub allows EDs to be notified of incoming patients via ePCR, ensuring situational awareness is maintained and ED resources can be allocated prior to ambulance arrival, decreasing transfer of care and wall times.

Gain Knowledge with Outcome Data

Patient outcome data provides insights on the impact of pre-hospital care. Receiving data from hospitals post-discharge is used for trending, benchmarking, reporting and driving improvements in EMS.

Facilitate Efficiency and Time

Decrease the time EMS spends in the ED with the ability to alert receiving facilities and inform staff of incoming patients.

Automated Communication

- EDs receive alerts for incoming patients
- EDs view pre-hospital information prior to patient arrival
- Access patient conditions, assessments, history, allergies and medications
- Quick view available for rapid insights in EDs

Hospital Hub is a secure and easy way to share data between emergency service organizations and hospitals.
